

NBCUniversal Networks FEC CHANGE

Action Required

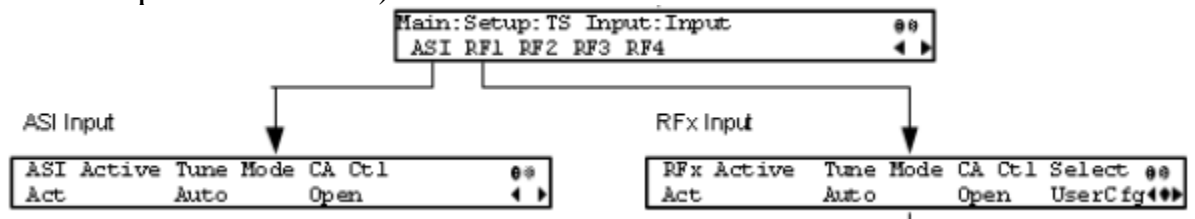

Tuesday, June 25th 2019

On Tuesday, June 25th, 2019, during our standard 4 AM ET – 7 AM ET maintenance window, NBCUniversal will be changing the FEC on our satellite uplinks from 3/4 to 5/6. The networks affected are Bravo East/West HD, CNBC HD/SD, CNBC World HD/SD, Golf HD, MSNBC HD, NBC Sports Network HD, NBC Sports Northwest HD, NBC Universo East/West HD, Olympic Channel HD, Oxygen East/West HD, SyFy East/West HD, USA East/West HD/SD. Signals on SES 1/8 – E!, Universal Kids and Telemundo Cable, as well as signals on G-17/7 – NBCSN SD and Golf Channel SD will not be affected. All SD networks derived as a downconvert of the listed HD feeds will also be affected. Network table is below.

- The FEC rate is DEFAULTED TO AUTO in the Cisco DVB-S2 compatible receivers and is designed to auto track. This setting can be verified in the TS Input - RF Input setup menu on the front panel or the WebGUI. Note – this is a depiction from the users manual and will not be your Frequency or symbol rate settings. DO NOT CHANGE those settings.

Freq(GHz) SymRate FEC L-Band RFLock**
15.000000 28.3465 Auto 1640.0 No Loc**

- The Tune mode MAY NOT BE DEFAULTED to AUTO and can be found under the SI Receive Setup as ACQUISITION MODE in the WebGUI or under the active input settings as Tune Mode in the TS Input – Input Menu (NOTE – this is not the “TUNE MODE” menu under TS Input, it is under the active input – RF or ASI)

- Any interruption to signal can be mitigated by changing these settings and/or re-acquiring the signal

```

Main: Setup: TS Input 00
Input Tune Mode Re-acquire 4
  
```

IT IS HIGHLY RECOMMENDED THE TUNE MODE BE SET TO AUTO FOR ANY FUTURE CHANGES NBCUNIVERSAL MAY NEED TO IMPLEMENT

Satellite/SERVICE	Virtual Channel
SES 1/9	
USA East HD	40
SyFy East HD	41
Bravo East HD	42
